

How to resolve incorrect program icons for Windows Vista / 7.

First, open Notepad and copy / paste the code below into a new text document:

```
taskkill /F /IM explorer.exe  
cd /d %userprofile%\AppData\Local  
attrib -h IconCache.db  
del IconCache.db  
start explorer
```

Save the file as *icons.cmd* on your desktop.

Now double click on the *icons.cmd* file that you saved on your desktop and all icons should be restored.

Note: When the above command file runs, the desktop will clear and all icons disappear before coming back again when Windows Explorer is restarted.
